

BOOST THE FLOW RATE

ON TRIDAC CS90 SPITTOONS &
CVS PLUS SUCTION MANIFOLDS

A modified manifold connector with a plug-on 14mm operating hose significantly reduces the vacuum level needed to produce a 300 litre/minute air flow rate. Indicative testing * revealed a vacuum level of 70 mbar at the back of the manifold connector @ 300 l/min.

The hose set illustrated, complete with the 14mm and 9mm hoses, is available as:

P/N 22 1579 High Flow hose set, 3 valves

It is also available as illustrated but without the small rotary valves (tip connectors)

P/N 22 1578 High Flow hose set, 1 valve

For prices and further details please either call us on 01923 242398 or email sales@tridac.co.uk

* Tested with a variable speed Tridac suction motor and a VA flowmeter.
